

USABILITY AUDIT

Antz Onboarding Kit Web edition v0.1

What works, what gets in a prospect's way, and how to make the kit more intuitive and more beautiful.

Date

24 September 2026

Scope

Home page, 32 module pages, search

Audience

Prospective clients

Findings

19 (5 high)

The foundation is right. The next step is where it falls down.

Verdict

The kit already does the hard part. It turns a 46-slide training deck into a short home page with real product screens one click away. A prospect can see what Antz is within seconds. The problems start when they try to go deeper or take the next step. On a phone, the product tour gives no visible feedback. Four modules show stock photos dressed up as app screens. One module shows the wrong module's screen. The only way to get in touch is an email link. The brand green also fails contrast on every primary button. All of the high-severity issues can be fixed in days, not weeks.

Scorecard

First impression		4/5
Finding a module		3/5
Understanding a module (desktop)		3.5/5
Understanding a module (mobile)		2/5
Taking the next step		2/5
Accessibility		2/5
Visual consistency		3/5

Expert judgement against Nielsen's 10 heuristics and WCAG 2.2 AA. Not measured with users. See Scope and method.

Fix these five first

1. **Show the screen next to the tapped feature on mobile.** Today it changes out of view. (F1)
2. **Stop presenting stock photos as product screens** on Lab, Diet, Pharmacy · Web and Compliance. (F2)
3. **Replace the Deworming screenshot,** which shows the Vaccination screen. (F5)
4. **Darken the action green to #27864B,** or use dark text on the brand green. White on #37BD69 is 2.43:1. (F15)
5. **Give "Book a walkthrough" a real destination:** a short form or scheduler, not just an email link. (F12)

4

Low

STRENGTHS

What already works (keep it)

Short home page.

Seven sections instead of 46 slides. A prospect sees the platform, one workflow and the areas of work without scrolling through a manual.

Real product, click-driven.

Each feature shows its actual screen, on the device it runs on. That matches the earlier research ruling that the tour should be click-driven, not scroll-driven.

Search in the hero,

with live results across modules and features. The rotating placeholder shows the range of what's there.

One source of content.

Every page renders from `content.json`, so a fact is fixed in one place. This was the root cause named in `framing.md`.

Honest content.

Unfinished modules are hidden, no unreliable total is printed, and the Housing hierarchy error is corrected.

Responsive, with reduced motion respected.

It works at 390, 1024 and 1440px. The parallax and animations switch off for visitors who have reduced motion turned on.

SCOPE AND METHOD

How this audit was done

A heuristic review of the kit as built, from the point of view of a prospect: a curator, vet lead or director who has never used Antz and has five minutes.

What was reviewed

- Home page: hero, search, Why Antz, featured workflow, Explore, Getting started, call to action, FAQ, footer
- All 32 visible module pages, content checked against `content.json`
- Search: queries, empty state, keyboard control
- Viewports: 1440px desktop, 1024px tablet, 390px phone (Chrome 153)

Checks performed

- Nielsen's 10 usability heuristics, applied to five prospect journeys
- WCAG 2.2 AA: contrast calculated for every text and background pair in the style sheet; keyboard paths; semantics
- Content audit: missing or mismatched screenshots, duplicate modules, copy length and pattern
- Asset weight on disk

Severity

HIGH · 5

Misleads a prospect, blocks a core task, or fails WCAG AA on the main path. Fix before sharing.

MEDIUM · 10

Slows people down, causes doubt, or weakens the case for Antz.

LOW · 4

Polish and consistency.

Limits

- No sessions with real prospects yet. Scores are an expert estimate. A five-task test plan in the Roadmap section will confirm them.
- Screen readers were not tested live. Semantic issues were found by reading the code.
- Page speed was estimated from file sizes, not measured on a hosted build.

19 findings, by prospect journey

1 • Understanding a module

F1

On mobile, tapping a feature changes a screen that is out of view

HIGH

antz

Onboarding

Home > Animal Records & Movement > Animal Transfer

Animal Transfer

Records and manages all animal movements within and outside the organisation, tracking requests, approvals, and allocations for secure, well-documented relocation.

Animal Records & Movement

6 features

Tap a feature to see the screen

Transfer Animal

Transfer from site

Richard Kite

In Request Transfer

Choose transfer type

antz

Onboarding

Security check-in / out

1 Transfer types

2 Approval

3 Cancel / reject

4 Security check-in / out

5 Allocation

6 Transfer log

More in Animal Records & Movement

Left: the screen sits above the list. Right: after tapping step 4, only its caption is visible.

SEEN

At phone width the device preview sits above the feature list. Once a visitor scrolls down to the features, tapping one updates a screen they can no longer see. The step highlights, but nothing visible happens.

WHY

The core interaction of the kit gives no feedback on the device most prospects will open a shared link on (visibility of system status).

FIX

At 900px and below, show the screenshot inline under the selected step, as an accordion. Alternatively, use a small sticky preview that stays on screen while scrolling.

EFFORT

Half a day

F2

Four modules show a stock photo inside a phone frame, as if it were the app

HIGH

Home > Operations & Oversight > Lab

Lab

The Lab Module centralises diagnostic test records and results, streamlines workflows between vets and labs, supports early disease detection and treatment, and maintains a secure digital repository for biosecurity, audits, and analytics.

Operations & Oversight 8 features Tap a feature to see the screen

1 Request listing & filtering

2 Detailed request view

3 Location & access control

4 Site-level test mapping

5 Individual & bulk assignment

6 Test & sample management

7 Update lab status

Lab photo in phone frame

Lab: a stock lab photo cropped into the phone, used for all 8 features.

SEEN

Lab (8 features), Diet (6), Pharmacy · Web (8) and Compliance (9) each have one image, and it's a stock photo. The page shows it in a phone frame for every feature.

WHY

A prospect reads the frame as "this is the product". It looks broken at best and misleading at worst, in the modules that matter most to vets and compliance leads.

FIX

When a module has no real screens, drop the device and show the features as cards with the photo as a header. Mark these modules needs—capture and commission the screens.

EFFORT

2 hours plus capture time

Antz Onboarding Kit · Usability Audit

4

F3 The featured workflow opens on a dimmed screen

MEDIUM

SEEN

The first Animal Transfer screen shows a modal over a grey scrim, so the page's main product image looks disabled.

WHY

This is the only product image a visitor sees without clicking. It should be the most confident screen in the kit.

FIX

Default to a clean, busy screen, such as the approval view (p14–t ransfer–2 . jpg). Let the dimmed modal appear only on step 1.

EFFORT

15 minutes

F4 Feature descriptions stay hidden until each step is clicked

LOW

SEEN

Only the selected step shows its description, so scanning a nine-feature module like Compliance takes nine clicks.

FIX

Keep the progressive disclosure, but add a one-line summary per step, or a "Show all" toggle for people who prefer to read than click.

EFFORT

1 hour

2 · Finding the right module

F5

Three treatment modules are near copies, and Deworming shows the Vaccination screen

HIGH

Home > Medical & Treatment > Vaccination

Vaccination

The Vaccination Module manages the complete vaccination lifecycle for animals from scheduling and direct administration to tracking upcoming, pending, skipped, and completed vaccinations. It ensures timely treatment, accurate dosage recording, and full traceability for disease prevention and clinical compliance.

Medical & Treatment

6 features

Tap a feature to see the screen

Home > Medical & Treatment > Deworming

Deworming

The Deworming Module supports systematic recording and monitoring of parasite-control treatments, ensuring timely administration, proper documentation, and clear tracking of every deworming activity for each animal.

Medical & Treatment

6 features

Tap a feature to see the screen

Vaccination (left) and Deworming (right). The Deworming phone is titled "Vaccination" and lists "Stopped Vaccine" and "Schedule Vaccination".

SEEN

Vaccination, Deworming and Supplements share the same six features and layout. The Deworming screenshot belongs to Vaccination. Four App/Web pairs (HIMS, Egg, Reports, Pharmacy) also appear as separate modules.

WHY

Repeats make the catalogue feel padded and leave people thinking "haven't I seen this?". The wrong screenshot is a factual error a vet will spot straight away.

FIX

Replace the Deworming capture now. Merge the three into one "Scheduled treatments" module with a type switch, and merge each App/Web pair into one module with an App | Web toggle. That takes the catalogue from 32 to about 24 modules, in line with IA-MAPPING.md.

EFFORT

1 day (content and a small UI toggle)

F6 The area tabs hide most of the catalogue, and Records looks empty**MEDIUM****SEEN**

Only one area is visible at a time, and it opens on the thinnest one: Records, with two cards and a large empty space. Its description mentions "chat", but Chat is hidden. The selected area isn't in the URL, so it can't be shared.

WHY

The first impression of the catalogue is "small". Recognition beats recall: prospects can't compare areas they can't see.

FIX

Open on the richest area (Animal Records & Movement) or on an "All" view. Put the area in the URL (#/area/medical). Generate each area's description from the modules actually shown.

EFFORT

3 hours

F7 Card copy was written for training, not for a first look**MEDIUM**

SEEN 28 of 37 intros start with "The ... Module". Cards cut them off after two lines, so they read like "The Notes Module centralises logging of daily updates, observations, and incident...". The median intro is 32 words.

WHY Low information scent. The first words, which carry the most weight, are spent on the module's name, which the card title already shows.

FIX Add a tagLine field of 12 words or fewer, outcome first. For example: "Every observation logged, linked to the animal, visible to the right team". Keep the long intro for the module page.

EFFORT Half a day (copywriting)

F8 Search is only on the home page, and going back loses your place**MEDIUM**

SEEN Module pages have no search. Pressing Back from a module returns to the top of the home page, not to the Explore section the visitor came from.

WHY Browsing becomes a loop of scroll, click, back, scroll again (user control and freedom).

FIX Add a compact search to the header on every page, opened with / or ⌘K. Save and restore the scroll position and area tab when going back to the home page.

EFFORT Half a day

3 · First impression

F9

The headline competes with the tiger's face

MEDIUM

SEEN

With the text centred, the headline sits across the tiger's eye and muzzle. Readability depends on a strong dark overlay that also dulls the photo.

WHY

Two focal points in the same spot. The hero loses both its impact and its clarity.

FIX

Keep the centred layout, but either crop the photo so the face sits above the headline, or choose an image with open space in the centre. A split layout was tried earlier and kept the face clear.

EFFORT

1 hour

F10

On a phone, the hero fills the whole first screen

MEDIUM

SEEN

At 390px, the photo, headline, search and five stacked chips take up about 840px. Nothing on the first screen shows there is more below. The chips are 32px tall, under the 44px touch target that Apple and Google recommend.

FIX

On phones, show the area chips as one horizontal scrolling row, make them 40 to 44px tall, and shorten the hero so the top of "Why Antz" peeks in. Add a sticky "Book a walkthrough" bar after the first scroll.

EFFORT

2 hours

Antz Onboarding Kit · Usability Audit

8

F11 The rotating placeholder never stops, and it can't be acted on**MEDIUM**

SEEN	The suggestion changes every 2.4 seconds for as long as the page is open. Pressing Enter on "Search Housing" does nothing, because the field is actually empty.
WHY	WCAG 2.2.2 asks that moving content lasting more than 5 seconds can be paused. Visitors also expect a suggestion to work.
FIX	Pause on hover and after three full cycles. Slow it to about 3.5 seconds. On focus, pressing Enter or Tab fills in the current suggestion and searches for it.
EFFORT	1 hour

4 · Taking the next step

F12 "Book a walkthrough" is only an email link**HIGH**

SEEN	All three calls to action open <code>mailto:hello@antz.systems</code> . On a work laptop with no mail app set up, or on a shared device, the click does nothing, and there is no confirmation either way.
WHY	This is the kit's single goal, and its most likely point of failure.
FIX	Link to a short form (name, organisation, number of sites, preferred time) or to a scheduling page. Show a confirmation state. Keep the email address visible, with a copy button, as a fallback.
EFFORT	Half a day plus a form endpoint

F13 There is no proof for the claims**MEDIUM**

SEEN	"Why Antz" lists six benefits ("Secure by design", "Real-time updates") with no numbers, customers, quotes or certifications behind them.
WHY	A prospect is looking for reasons to believe. Unbacked benefit cards read like marketing and are easy to skip.
FIX	Reduce the six cards to three, each backed by one fact and one product crop. Add a strip with the number of sites, animals and species currently managed on Antz, and one short customer quote. This needs figures from Antz; nothing should be invented.
EFFORT	1 day once content exists

F14 The FAQ misses the questions buyers ask first**LOW**

SEEN	The five FAQs cover what Antz is, devices, roles, sites and how to start. They don't cover pricing, time to go live, moving existing records into Antz, training, offline use, or where data is hosted.
FIX	Collect the top ten questions from the sales team and add answers they approve. Group them into Product, Setup and Security.
EFFORT	2 hours once answers exist

5 · Accessibility

F15 The brand green fails contrast on buttons and small text**HIGH**

White on #37BD69: 2.43:1

SEEN	White on #37BD69 is 2.43:1, against a 4.5:1 minimum. This covers every "Book a walkthrough" button, the step numbers and the module icons. The darker green #2A9D55, used for eyebrows, links and "N features", is 3.47:1. The light grey #7A8684 is 3.77:1. Full table in the Appendix.
FIX	Add an action token --green-action: #27864B (4.57:1) for button fills and green text, and keep #37BD69 for large shapes and accents. Or keep the brand green on buttons with dark text #0E1715 (7.5:1). Change the light grey to #65716D (5.08:1).
EFFORT	1 hour (tokens only)

F16 Screen readers aren't told when the page changes, and search lacks the right roles**MEDIUM**

SEEN	Moving between the home page and a module page swaps the content but doesn't move focus or announce the new page. The search box has no combobox role or aria-activedescendant, so arrowing through results is silent. The feature steps use role="tab" with no matching tab panels.
FIX	After each route change, move focus to the page's heading. Follow the ARIA 1.2 combobox pattern for search. Mark the steps as a listbox, or as buttons with aria-pressed.
EFFORT	Half a day

6 · Speed and consistency

F17 Screenshots are heavy

MEDIUM

SEEN	148 screenshots add up to 39 MB. The largest PNGs are 1.9 MB (p22-animal.png) and 1.6 MB. The hero JPEG is 0.7 MB. Images are lazy-loaded, but a module page on mobile data still takes seconds per screen.
FIX	Convert to WebP or AVIF at two sizes with srcset, aiming for 150 KB or less per screen and 250 KB or less for the hero. Preload the next step's screen when a step is hovered or tapped.
EFFORT	2 hours (script)

F18 Names and labels speak to staff, not prospects

LOW

SEEN	The header reads "Antz Onboarding", but a prospect isn't onboarding yet. Module names mix styles ("Notes Module", "Housing", "Reports · App") and include a 45-character "Hospital Information Management System · App". Spelling mixes UK and US English (organisation, Familiarize).
FIX	Rename the header label to "Product tour". Drop "Module" from names and shorten HIMS to "Hospital". Standardise on UK English.
EFFORT	1 hour

F19 Icons mix two styles

LOW

SEEN	The icon set mixes outlined icons (add, edit, filter) with filled ones (notes, tags, report). At 15px, the Operations chip icon reads as a plain square.
FIX	Move to one family. The Figma file already uses Material Symbols (search_FILL0_wght400), so Material Symbols Rounded at weight 400 matches the product.
EFFORT	3 hours

Making it more intuitive

Prospects don't think in modules. They think about their job and their problems. These six changes move the kit from "here's everything we have" to "here's how Antz helps you".

1. Start with "Who are you?"

Below the hero, add four role cards: Curator, Veterinarian, Keeper, Director. Each opens a short path of three to five modules that matter to that role, with a line on why.

Cuts 32 choices down to four. Needs a role-to-module mapping from the product team.

2. Tell stories, not lists

Replace the single featured workflow with two or three short scenarios that cross modules: "Moving an animal between sites" (Transfer → Approvals → Security → Housing), "An animal falls ill", "An egg hatches".

IA-MAPPING.md §05 confirms the screens for the transfer scenario already exist.

3. A five-minute guided tour

Offer a "Take the tour" button that walks through five screens with Next and Back, a progress bar ("3 of 5") and a finish screen that leads to booking.

Gives a clear start, middle and end. Visitors can still leave the tour and explore freely.

4. Search everywhere, and forgiving

Put search in the header with ✎. Add synonyms (HIMS → hospital, "medicine" → Administer, "death" → Mortality) and show recent searches.

Prospects use their own words, not Antz's module names.

5. One module, both surfaces

Merge each App/Web pair and the three treatment modules. On a module page, an App | Web toggle switches the device frame and screens.

Fewer, richer modules. Shows the two-surface story visually instead of repeating it.

6. Remember and resume

Keep the visitor's place when they go back. Mark modules they've already viewed with a small tick, and offer "Continue where you left off" on return visits (stored in the browser only).

Lowers the effort of long evaluations that happen over several visits.

Proposed home page order

#	SECTION	JOB	CHANGE FROM TODAY
1	Hero + search	What Antz is, in one line; search for your own problem	Crop fix, acts on suggestions
2	Proof strip	Sites, animals and species on Antz; one quote	New
3	Who are you?	Four role paths	New
4	Scenarios	Two or three cross-module stories with real screens	Replaces the single spotlight
5	All modules	Catalogue with an All view, taglines and thumbnails	Opens on All, about 24 modules
6	Getting started + call to action	First day, then book with a real form	Form replaces the email link
7	FAQ	Pricing, setup, security	Answers from the sales team

Making it more beautiful

The Figma "Help & Support" frame sets a strong direction: wildlife photography, white space, and the product on organic shapes. These changes push further in that direction and make it consistent.

Put the product in the hero

Float one real Antz phone screen beside the headline, on an organic blob like the Task Management frame in Figma. Photography brings the emotion; the screen proves the product.

A deliberate colour system

Three greens with set jobs: **Brand** #37BD69 for shapes and accents, **Action** #27864B for buttons and links, **Tint** #E8F6EE for backgrounds. Deep teal #1F515B is for dark sections only.

Screens as thumbnails on cards

Module cards currently show an icon and cut-off text. A cropped strip of the module's real screen at the top of each card gives instant recognition and variety.

Direct the photography

Pick one mood: natural light, green-leaning, the subject looking into the page, and space for text. Apply the same colour grade to every photo. Swap the chick used for "Mortality" for something calmer.

A tighter type scale

Six sizes: 56 / 40 / 28 / 20 / 16 / 14. Two weights: 600 for headings, 400 for body. Tabular numbers for counts. Sentence case for chips, which reads faster than spaced capitals.

Rhythm and motion

Alternate white, soft and dark sections. Use the fern-texture band from Figma for one dark "scenario" section. Keep motion to 140, 240 and 320ms on one easing curve, as in design-direction.md.

Colour tokens: today and proposed

USE	TODAY	CONTRAST	PROPOSED	CONTRAST
Primary button (white text)	 #37BD69	2.43:1	 #27864B	4.57:1
Green text: eyebrows, links, meta	 #2A9D55	3.47:1	 #27864B	4.57:1
Secondary grey text	 #7A8684	3.77:1	 #65716D	5.08:1
Alternative: brand button, dark text	n/a		 #0E1715 on #37BD69	7.50:1

Roadmap and how to validate it

Now

About 2 days · before sharing with prospects

- Inline screen on mobile F1
- Card layout for modules without screens F2
- Replace the Deworming screen F5
- Contrast tokens F15
- Real booking form F12
- Clean spotlight screen F3
- Pause and act on the rotating search F11

Next

1 to 2 weeks

- Merge duplicate modules F5
- Taglines of 12 words or fewer F7
- Header search and restored scroll position F8
- "All" view and area URLs F6
- Mobile hero and chips F10
- ARIA and focus fixes F16
- Image optimisation F17
- Names, labels, icons F18 F19

Later

Needs content from Antz

- Role-based paths
- Cross-module scenarios
- Guided five-minute tour
- Proof strip and customer quote F13
- Buyer FAQ F14
- Product-in-hero art direction

Five-task test with prospects

Run with five people who match the audience: curators, vet leads, operations managers. Sessions last 20 minutes, remote, thinking aloud. Run it after the "Now" fixes.

1	"You manage three sites. Find out whether Antz can handle moving an animal between them."	Measures: scenario findability, time
2	"Find where you would record a vaccination and see what the screen looks like."	Measures: search, module tour on mobile
3	"What would your vets use Antz for every day?"	Measures: role relevance, copy clarity
4	"Is there anything here that makes you trust or doubt Antz?"	Measures: credibility, proof gaps
5	"Arrange a demo for your team."	Measures: conversion path success

Track success rate per task, time on task, and a single ease rating (1 to 7) after each task. Five users typically surface most of the serious usability problems.

Contrast and content checks

PAIR (TEXT ON BACKGROUND)	WHERE IT'S USED	RATIO	AA (NORMAL TEXT)
#FFFFFF on #37BD69	Primary buttons, step numbers, module icon tiles	2.43:1	Fail
#FFFFFF on #2A9D55	Button hover	3.47:1	Fail
#2A9D55 on #FFFFFF	Eyebrows, "See in detail", "N features"	3.47:1	Fail
#2A9D55 on #F5F8F7	Same, on soft sections	3.25:1	Fail
#2A9D55 on #E8F6EE	Icons in tinted tiles (3:1 needed for icons)	3.11:1	Pass (graphics)
#7A8684 on #FFFFFF	Breadcrumb, search result meta, placeholder	3.77:1	Fail
#44544A on #FFFFFF	Body and secondary copy	8.04:1	Pass
#1F515B on #DDEBE9	"Featured workflow" tag	7.18:1	Pass
#FFFFFF on #1F515B	Footer	8.80:1	Pass
#9FE3B9 on #1F515B	Footer hover, area counts	5.93:1	Pass

Content inventory

CHECK	RESULT
Visible modules	32 of 37 in the source (3 Foundations used on the home page, 2 needs-content hidden)
Modules with a real screen for every feature	28 of 32
Modules using a stock photo as their only "screen"	4: Lab, Diet, Pharmacy · Web, Compliance
Wrong screenshot	Deworming shows the Vaccination screen
Near-duplicate modules	Vaccination, Deworming, Supplements; 4 App/Web pairs
Intros starting "The ... Module"	28 of 37 · median length 32 words, longest 44
Screenshot weight	148 files, 39 MB · largest 1.9 MB

Contrast ratios calculated with the WCAG 2.x relative luminance formula. Screenshots taken with Chrome 153 on 24 September 2026 from antz-onboard/.
